**Dashboard Devices To Launch New ENV Systems  
(Entertainment & Navigation for Vehicles) at CES 2009**

*State of the art, easy-to-use, infotainment systems offer the world's first "True Dual Zone"*

**Clearwater, Florida (Dec 08, 2008)** – Dashboard Devices, LLC a manufacturer located in Clearwater, Florida will launch their new product line at the Consumer Electronics Show (CES) in Las Vegas, NV from January 8<sup>th</sup>-11<sup>th</sup>, 2009.

Visitors to Dashboard Devices' CES booth IP211, in the Innovations Plus Area at the Sands, will be greeted with a fun, state of the art automotive-based computer system, named the "ENV" System (ENV is an acronym for **E**ntertainment and **N**avigation for **V**ehicles). Featuring patent-pending and copyrighted technology, the ENV System can easily be considered the world's most advanced in-vehicle multimedia infotainment system. The ENV systems offer the world's first true "Dual-Zone" capabilities, meaning the driver can choose media to be played on the rear passenger screens or the passengers can select their own media, all from the same source machine. When media is selected for the rear passengers the driver's media selections and GPS options will remain uninterrupted.

Other features include: a dash-mounted Transreflective 7" touchscreen (rear passenger screens are also 7" touchscreens); integrated, easy to understand software; Intel Core Duo processor, 160GB Harddrive; built-in WiFi, Bluetooth (hands-free phone); Voice Recognition; Dual FM Radios; Satellite radio compatibility; DVD-RW (burner), GPS navigation; and several add-ons to expand the features of each users system to their individual wants and needs.

"The ENV systems are designed to fit in ANY automotive application so it is a true 'plug-n-play' upgrade" commented Mike Murphy, Dashboard Devices founder and product developer. "Our knowledgeable staff will be on-site at CES to provide live demonstrations of the ENV System with our Dual-Zone to give you an appreciation for the styling, convenience and technology that Dashboard Devices has to offer."

For pre-show questions, demonstration, and ordering, contact Dawn Barker, Vice President of Marketing and Business Development, at [Dawn@DashboardDevices.com](mailto:Dawn@DashboardDevices.com) or visit <http://www.DashboardDevices.com>

**About Dashboard Devices:**

Dashboard Devices, LLC. is a manufacturer of state of the art and innovative technologies for the automotive consumer and industrial markets. By developing PC based systems, Dashboard Devices offers a superior option for not only infotainment systems, but also offers solutions for commercial logistics, marine applications and aircraft. The dedicated in house research and development team has spent several years finalizing a perfect system that offers the ONLY true Dual Zone options in the industry.
